LBW Equipment

LINE BORING & ROTARY WELDING OVERVIEW

Portable Line Boring and Rotary Welding equipment, is the ideal solution for most on-site repairs or over-hauls within the heavy plant, marine, off-shore, petrochemical, and heavy industrial sectors to name but a few. LBW Machines, have helped over many years, its commercial customers maintain a high level of maintenance repairs, helping them succeed into days demanding environments.

The affordability and investment cost, in our machines, helps customers move from a period of losses or low profitability (old conventional repairs), into a more profitable & repetitive repair service.

The Portability of our line boring & rotary welding machines, means they can be easily taken on-site to the plant, as opposed to transporting heavy plant or work pieces to the workshop, thus resulting in far less down-time and transport costs than would otherwise be the case.

This also reduces or avoids the need for stand-in equipment and saves on associated labour and transport costs.

Portable Line Boring and Welding Machines, allows the operator to re-machine elliptical worn bores (oversized) & then rotary weld them (undersize), and then machining them back to the original manufactures tolerances/spec or to a bespoke bush size, within hours. This process is achieved with only 1 Machine and 1 Setup.
